

A Chatbot Providing Information on Species and Habitats

Wild Wonders

Exploring the Wonders of the Natural World

By Kartavya, Navya and Azmah

What is the purpose of the Nature and Wildlife Bot ?

- The Nature and Wildlife Bot is designed to be an interactive guide that educates users about diverse species and their habitats.
- Its main objectives are to provide accessible information on animals, birds, and plants, explore ecosystems, and highlight conservation statuses.
- This gives a sense of connection and encourages the users to contribute to wildlife conservation.

Our chatbot is also linked with real time information about the newly discovered species and their habitats

Databases:

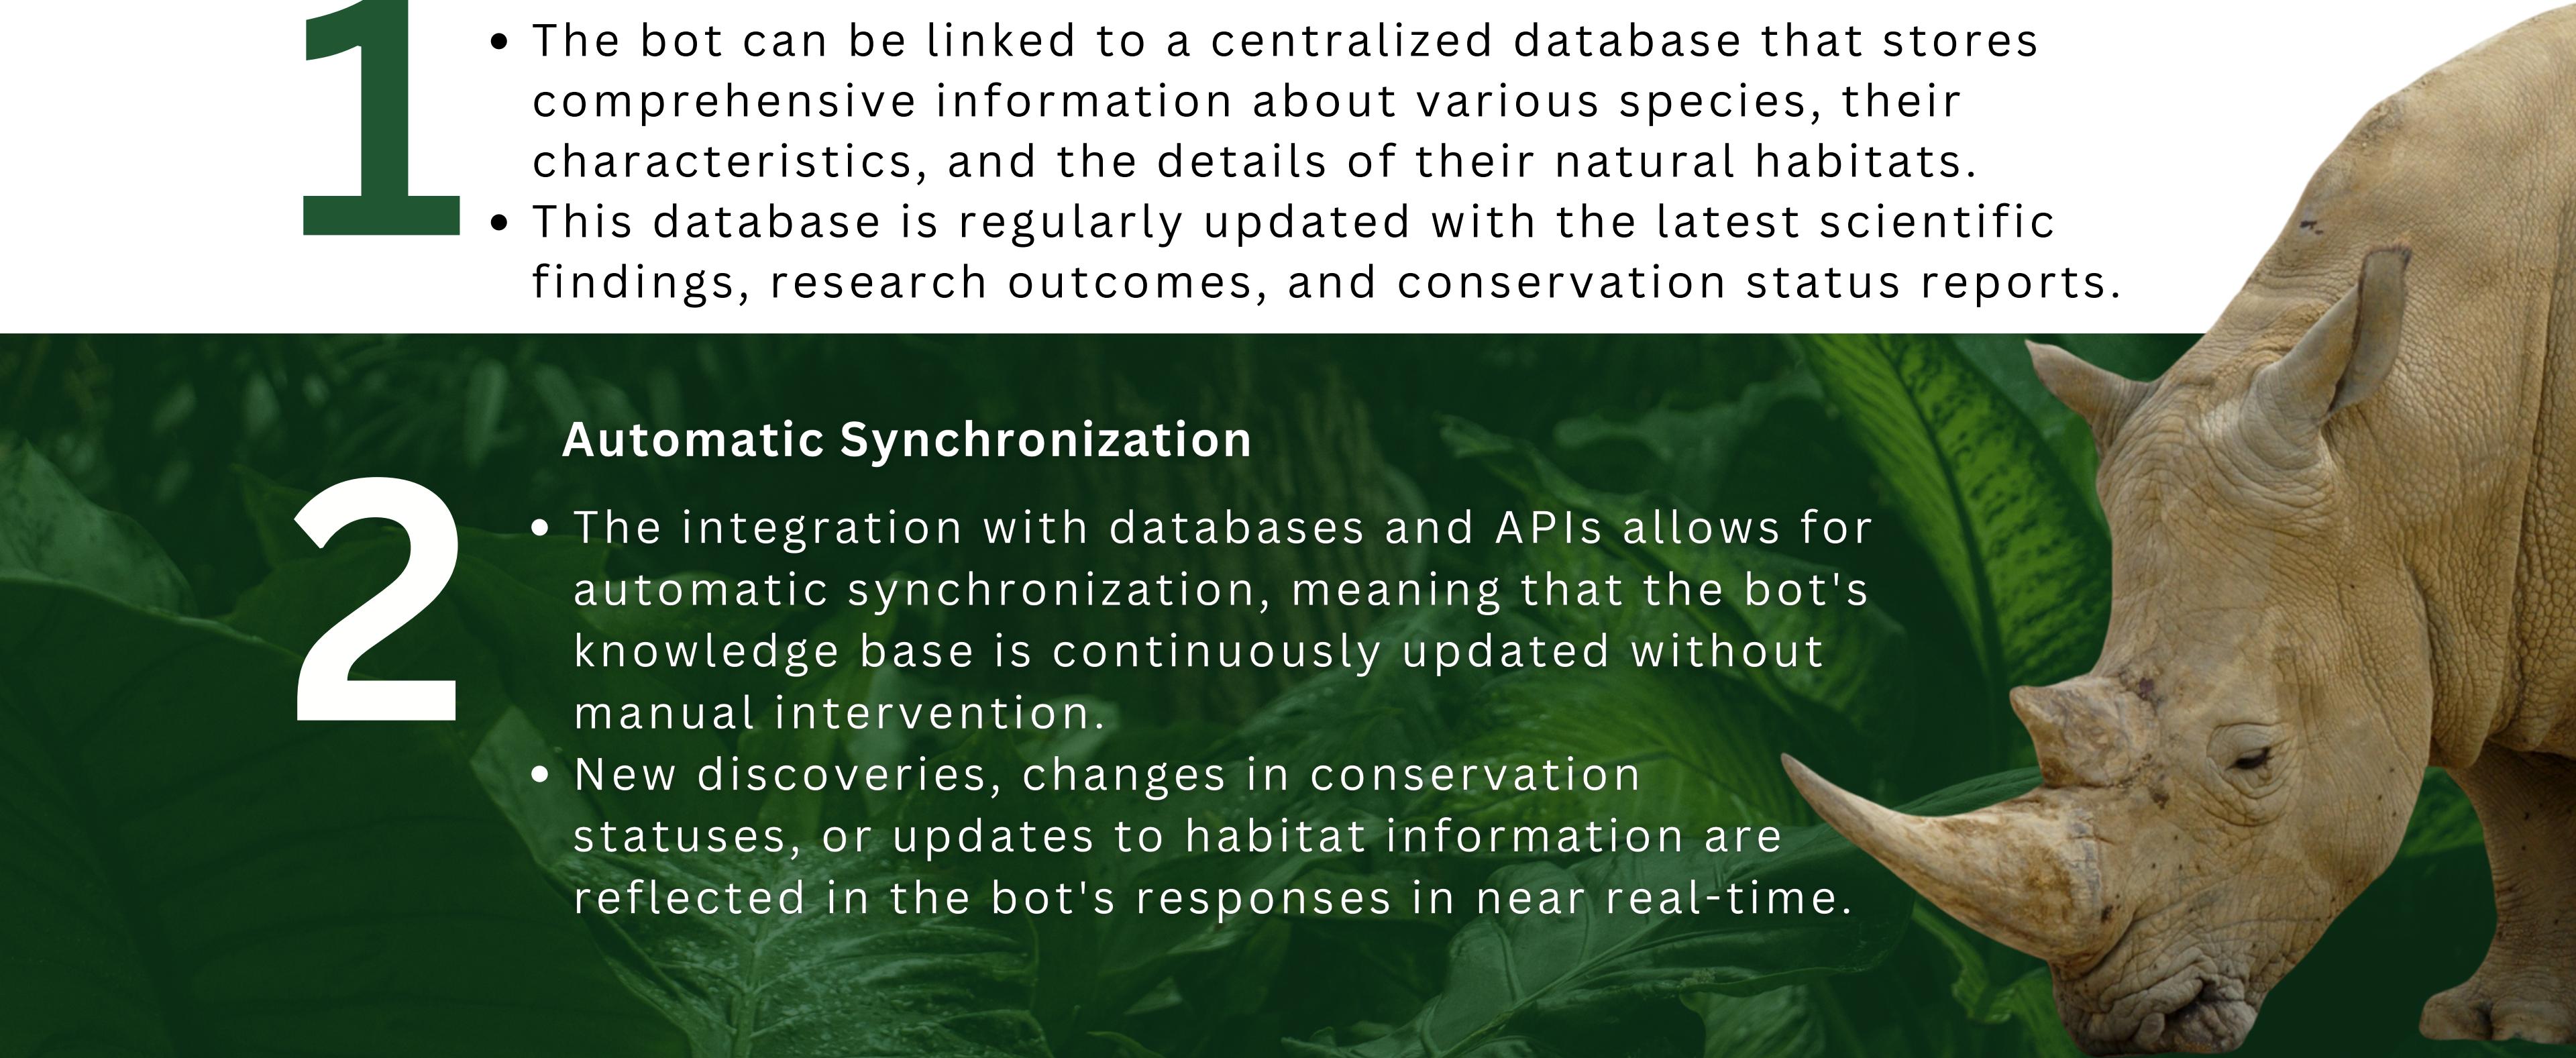

1

- The bot can be linked to a centralized database that stores comprehensive information about various species, their characteristics, and the details of their natural habitats.
- This database is regularly updated with the latest scientific findings, research outcomes, and conservation status reports.

2

Automatic Synchronization

- The integration with databases and APIs allows for automatic synchronization, meaning that the bot's knowledge base is continuously updated without manual intervention.
- New discoveries, changes in conservation statuses, or updates to habitat information are reflected in the bot's responses in near real-time.

The educational aspect of the wildlife bot:

01

Comprehensive Information

02

Tips for Conservation

03

Learning Through Interaction

How are we helping the wildlife ?

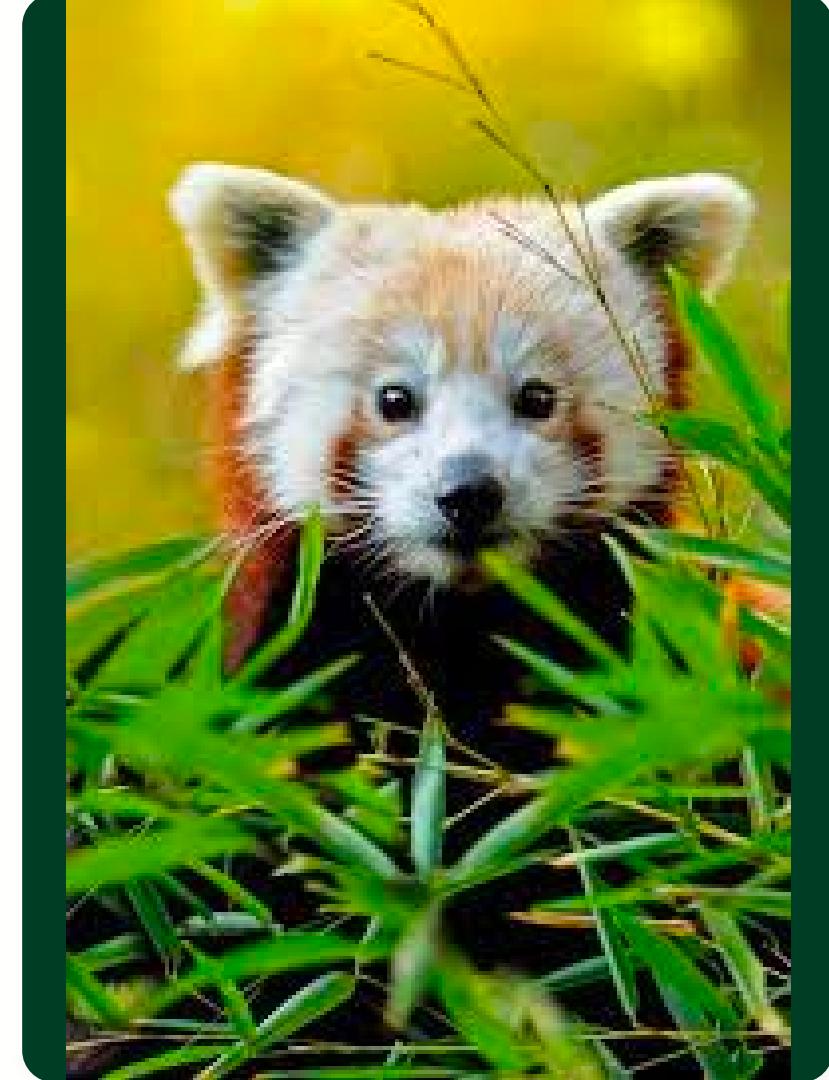

- Collaborating with local communities to promote sustainable practices that benefit both people and red pandas.
- Enforcing laws and regulations related to wildlife protection.

- Collaborating with international organizations, governments, and NGOs to leverage resources and expertise for red panda conservation.
- Participating in global initiatives aimed at protecting endangered species and their habitats.

- Raising public awareness about the importance of red pandas and their conservation.
- Educating local communities, policymakers, and the general public on the threats faced by red pandas and the need for their protection.

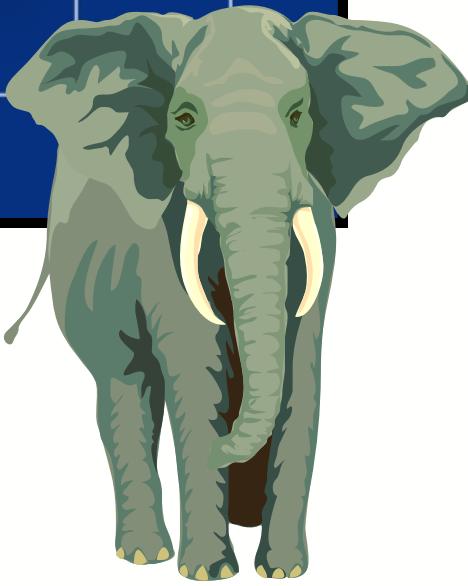

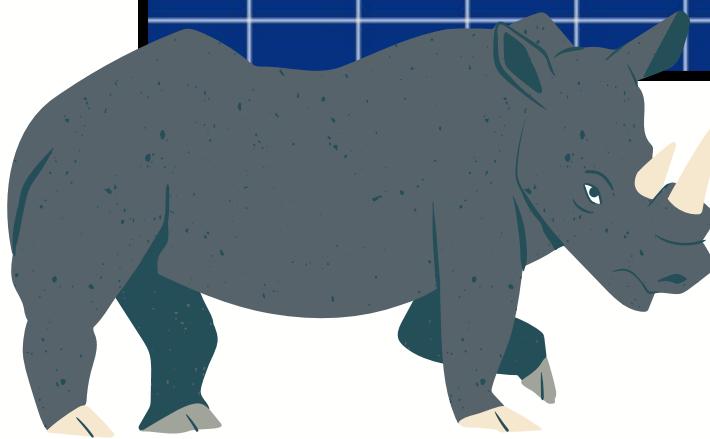

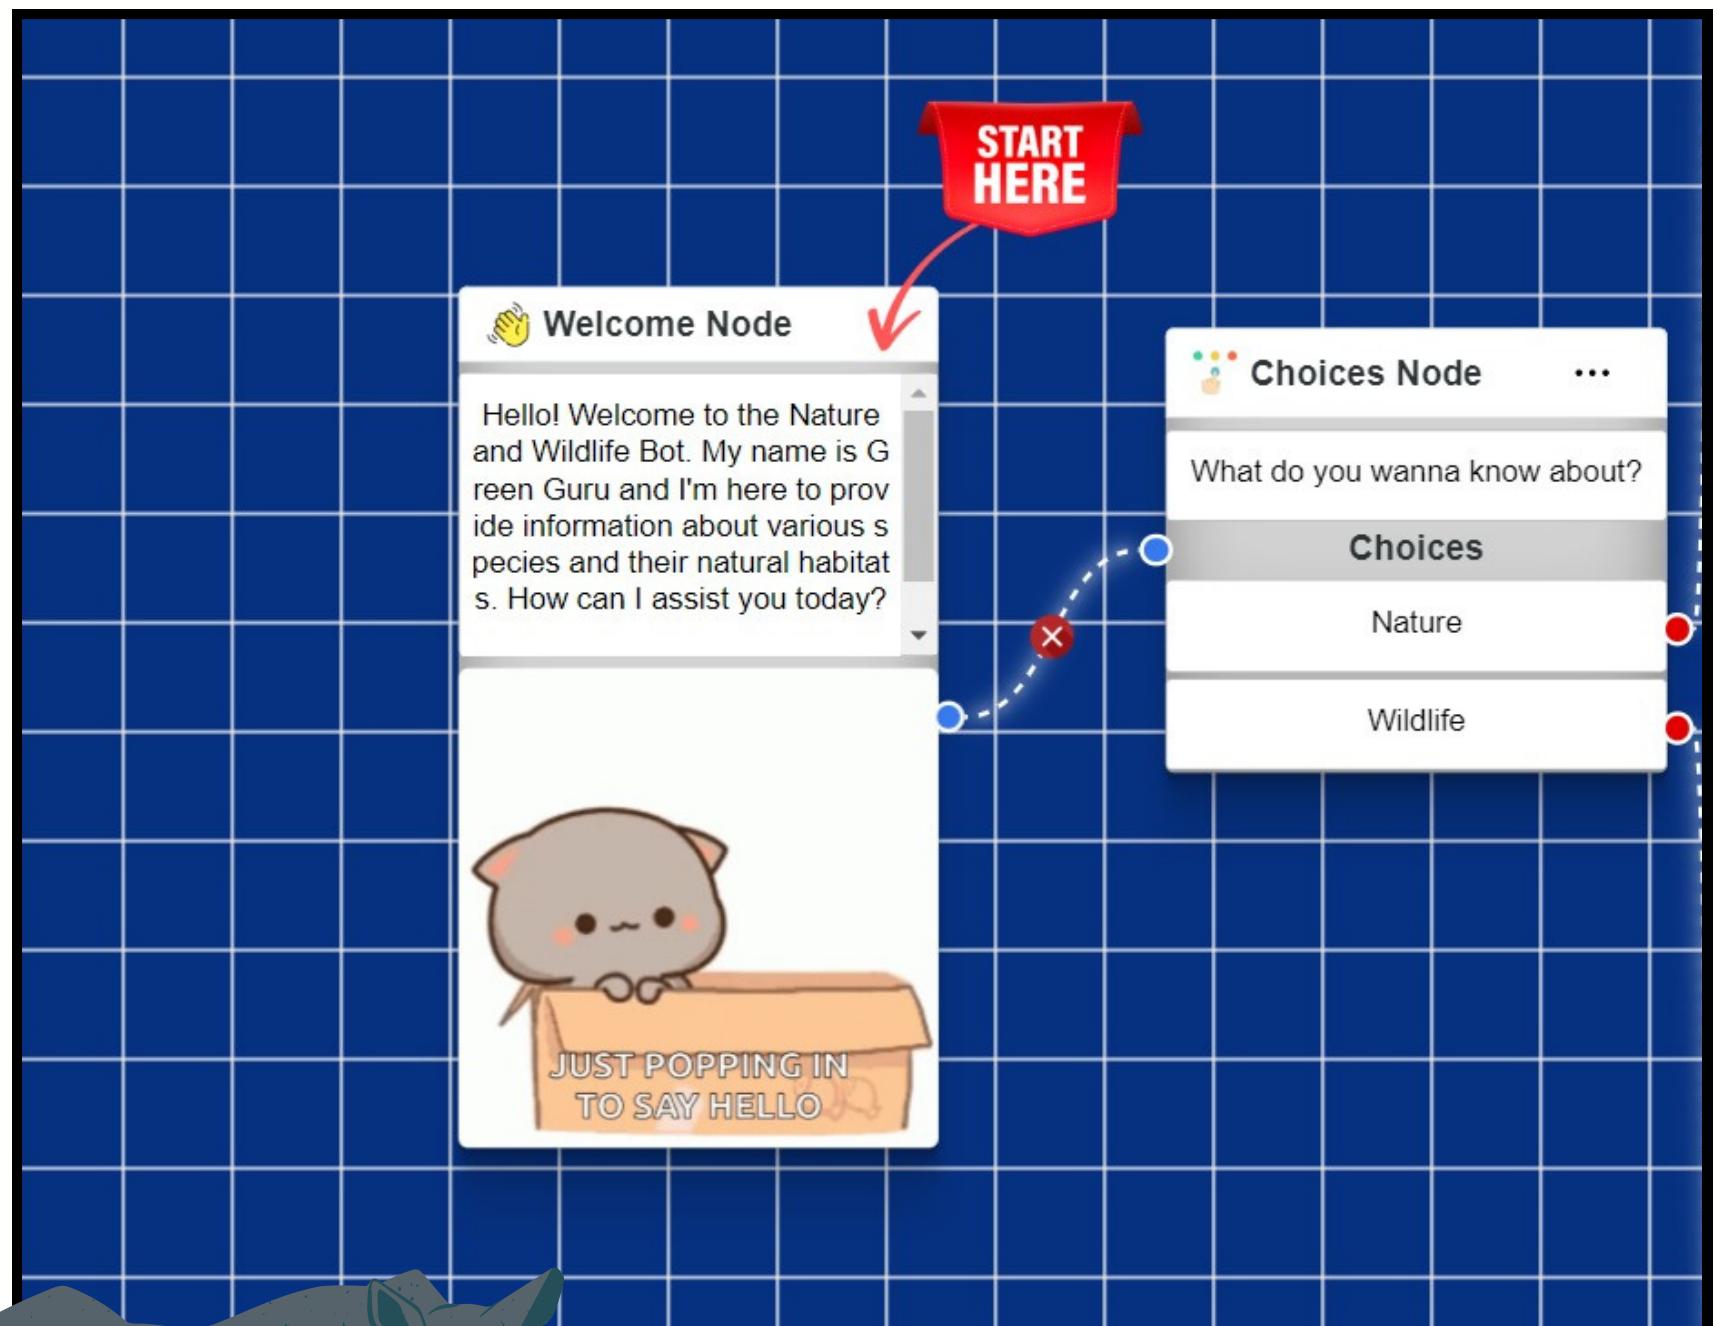

Example: *Red Panda*

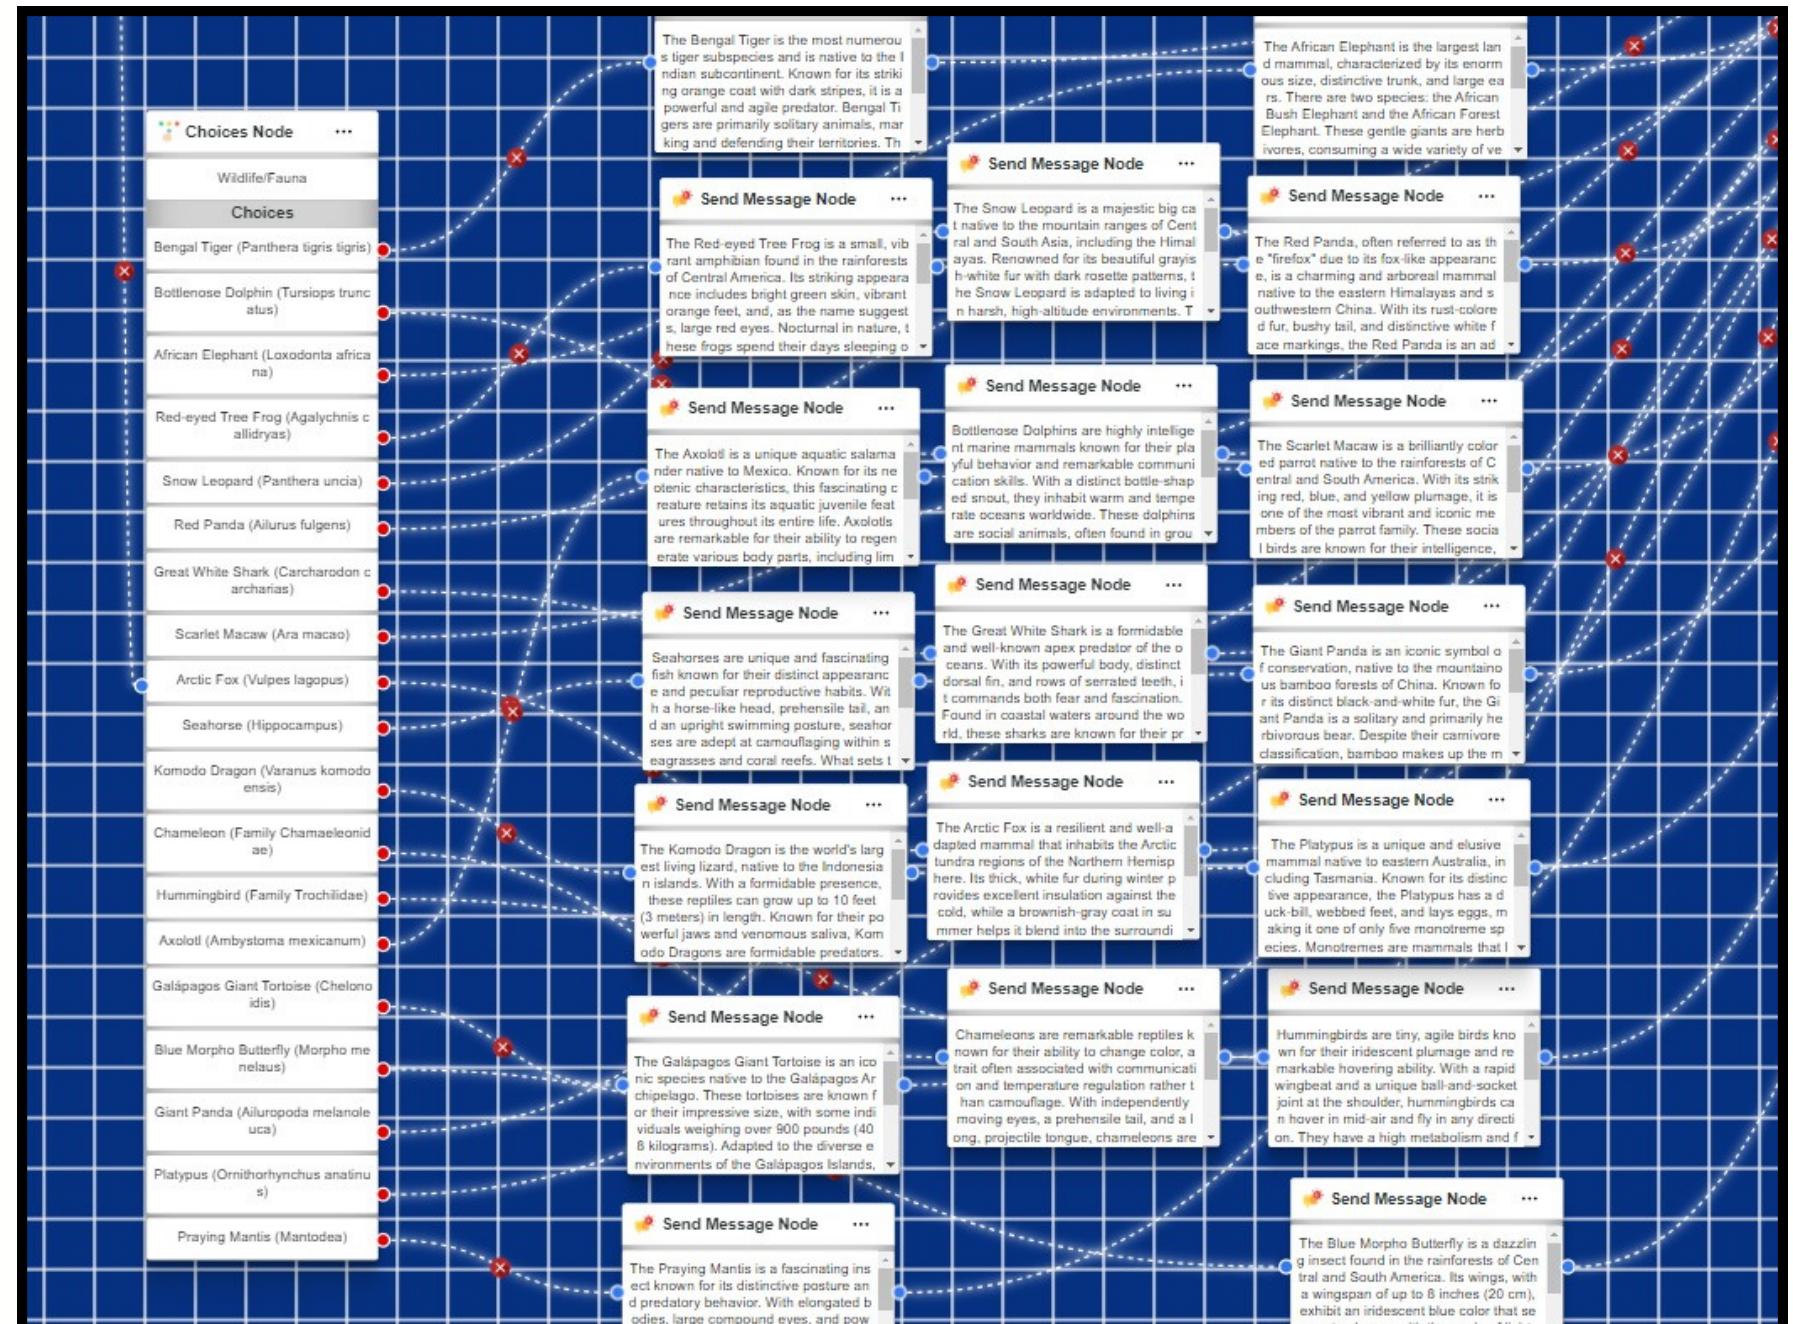

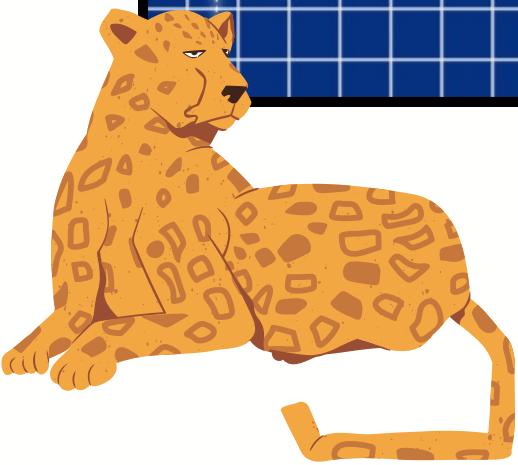

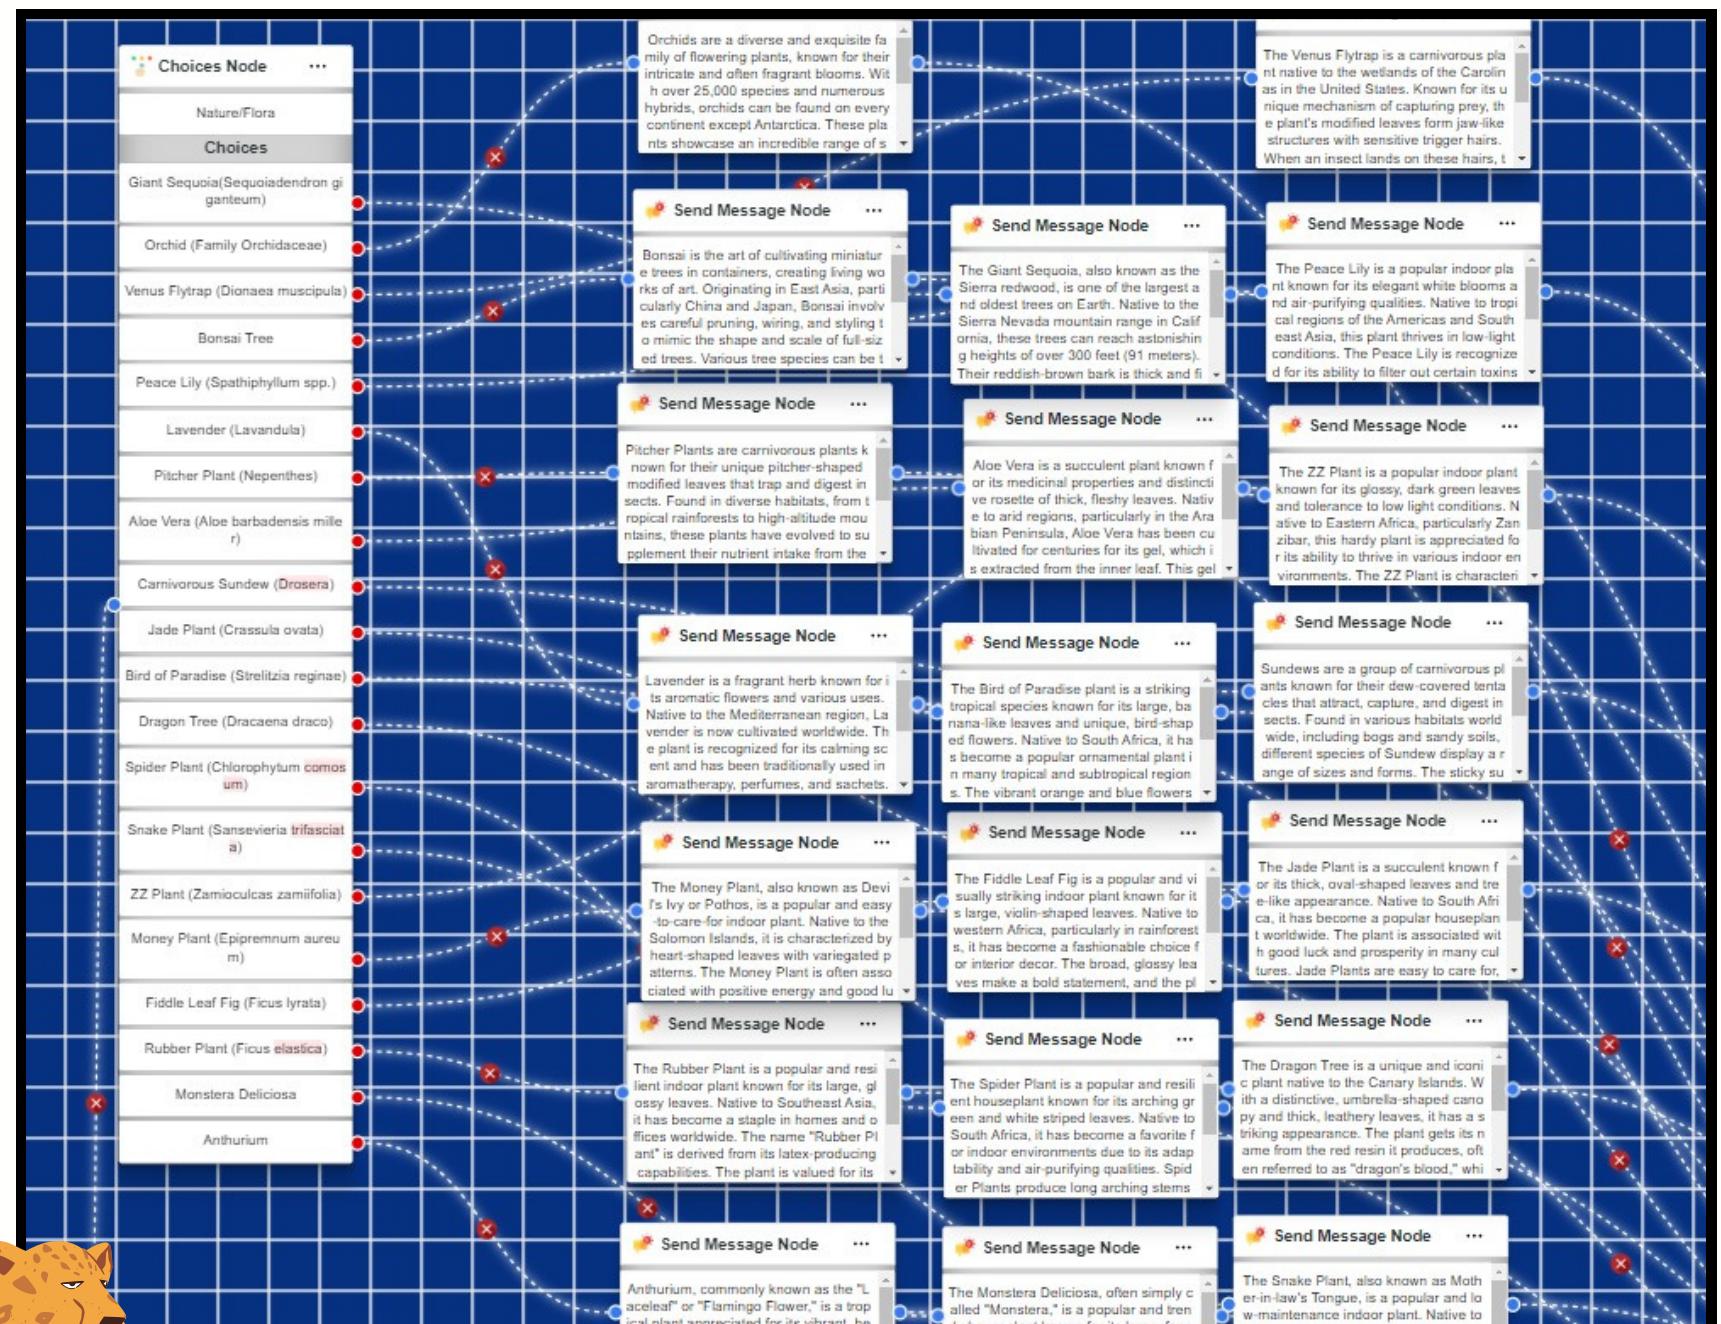

ChatBot- Green Guru

The Green Guru is a chatbot made with Conferbot that provides information about various species and their natural habitats. This Chatbot will provide precise and proper information about many beautiful and mysterious animals and plants that exist on our planet.
